

# Tame Those Nasty Dragons of Implant Prosthetics

Emil LA Svoboda, PhD, DDS

# SPEAKER PACKET

# Recognize, Separate and Tame the Dragons of Implant Prosthetics... The Svoboda Way

Cementation of dental prosthetics is a hydraulic event... that is not taught in dental school. Cementation of prosthetics over natural teeth or implant abutments is one of the most common treatments of modern dental practice... yet the interaction between the prosthetic and the tissues during cementation remains unexamined. Until now.

**Dr. Svoboda leads the way.**

Intra-oral cementation is a hydraulic event that can expose the patient to a multitude of risk factors for developing caries and peri-retainer diseases such as gingivitis and periodontitis around natural teeth and mucositis and peri-implantitis around dental implants. These preventable risk factors include overhanging and open margins and residual submarginal cement.

Some dentists restoring dental implants employ the screw-in installation technique in an effort to avoid intra-oral cementation related complications. In doing so, they inadvertently expose their patients to misfit implant parts and related mechanical and biological problems. Yes, there appears to be no escape from seemingly inherent deficiencies in prosthetic treatment.

It's time for dental education to include information that makes prosthetic installation safer. Dr. Svoboda's research had led to his identifying Prosthesis Dimensional Error and Tissue Effects as the root causes of mechanical complications that lead to biological consequences. He calls these root causes the "Old Dragons of Dentistry" because they have been plaguing dentists for 100 years. Invite Dr. Svoboda to your next meeting and learn how to recognize, separate and tame these Dragons to make treatment easier, faster, better.

Dr. Svoboda's lecture and optional **Hands-On Models Workshop** brings several new concepts to life, in a way that helps the dentist critically evaluate prostheses installation procedures and make them better. Our patients deserve better. Dentists need to understand what they need to do to make their treatment safer. Dr. Svoboda leads the way.

Don't miss the opportunity to experience Dr. Svoboda's research and innovation. It is a game changer for the whole dental industry. Dr. Svoboda has lectured about his concepts across Canada and the USA and has won multiple awards for his innovative research and prosthetic designs.

**Emil LA Svoboda, PhD, DDS**

Fellow of the Academy of General Dentistry  
Honored Fellow of the American Academy of Implant Dentistry  
Diplomate of the American Board of Oral Implantology/ Implant Dentistry

**Web Based LIVE Video Conference  
Education Now Available!**

## LEARNING OBJECTIVES:

- Identify how current prosthesis installation techniques can contribute to the incidence of complications and related peri-implant disease
- Learn how to use well-designed abutments and prostheses to mitigate complications related to both root causes of current prosthesis installation techniques
- Understand why a safer intra-oral cementation step is still a necessary part of an installation protocol
- Discover why some peri-implantitis cases can be successfully treated while others cannot
- Prevent the conditions that result in a poor long-term prognosis for the patient's implant treatment

---

**Current research places peri-implant disease rates between 45 – 65%, whether prosthetics are cemented-in or screwed-in.**

---

**Suggested Audience:** General Dentists, Prosthodontists and all those involved in the placement, restoration or maintenance of dental implants and prosthetics. Presentation can be modified for Dental Team Members.

**Suggested Formats:** Full or Partial Day Lecture, Keynote, Workshop

# Imagine Reducing Peri-implant Disease by 60%

By preventing two of the root causes related to prostheses installation technique, we can significantly reduce peri-implant disease and make implant treatment safer. For the dentist, treatment complications are bad for business and reducing complications make for a less stressful, more profitable practice.

**Dr. Emil LA Svoboda** has placed and restored thousands of implants and has dedicated much of his current professional life to understanding the causes of prosthetic related peri-implant disease.

His designs and protocols are adaptive screw-in and cement-in prosthesis installation techniques which address the two root causes of the disease: abutment-implant misfit and residual subgingival cement. These designs and protocols are directed at preventing complications and are available for all dentists to use in practice today. **In short, The Svoboda Way supports Safer Implant Treatment.**

Dr. Svoboda has presented his work across North America. His prosthetic lecture is officially part of the AAID Maxicourse resource material for 10 programs worldwide. As a practicing dentist he earned Fellowship with the Academy of General Dentistry, Fellowship with the American Academy of Implant Dentistry and Diplomate of the American Board of Oral Implantology / Implant Dentistry.

Dr. Svoboda was awarded Honored Fellow Status by the American Academy of Implant Dentistry for his contributions to Implant Dentistry. He has also won First Prize for his Table Presentations at AAID Meetings: Orlando 2016, Vancouver 2017, Dallas 2018 and Las Vegas 2019. Additionally, his ePoster presentations were awarded by AAID in Dallas 2018 and Las Vegas 2019. He also received The Award of Merit from the Ontario Dental Association for contributions to Organized Dentistry. Most recently, Dr. Svoboda presented at the 155th Chicago Midwinter Meeting 2020 on the topic of Taming Old Dragons: Improving Dental Implant Prosthetics.

***"This course is a breath of fresh air!"***

***Dr. Svoboda received top marks for his Emerging Speakers presentation at AAID Las Vegas October 2019***

### PRESENTATIONS: *(Partial List)*

- American Academy Implant Dentistry Annual Meeting (*multiple*)
- American Academy of Implant Dentistry District Meeting (*multiple*)
- American Academy of Implant Dentistry Maxicourse (*multiple*)
- Academy of General Dentistry Annual Session (*multiple*)
- American Dental Congress, 2018 - Keynote Speaker
- Chicago Midwinter Meeting 2020
- Durham ON Dental Society (Ontario Dental Association)
- Halton Peel Dental Association (Ontario Dental Association)
- Headwaters Dental Association (Ontario Dental Association)
- Regional Niagara Academy of General Dentistry (Ontario Dental Association)
- Spectrum Days Dental Meeting (Toronto) (*multiple*)
- Toronto Implant Academy (*multiple*)
- Vancouver and District Dental Society Midwinter Clinic
